EDUCATION

Bachelor of Science

Data Science

Boston University

📅 Aug 2022 - current

📍 Boston, MA

🎓 3.98/4.0

SKILLS

Programming

- Python: 4 years
- Machine Learning: 3 years
- Data Visualization: 3 years
- Rust: 2 years
- Web Scraping (Selenium, BeautifulSoup, HTTP): 2 years
- Big Data Technologies (Hadoop, PySpark, MongoDB): 1 year

Microsoft Data Platform

- Business Intelligence (Power BI): 3 years
- Integrated Excel Automation (OfficeScripts, Power Automate): 3 years
- Data Engineering (Azure Synapse, Azure Databricks, Microsoft Fabric): 1 year
- Semi-structured Data Warehousing (Lakehouses, ABFS): 1 year

CAREER OBJECTIVE

Data Scientist with 3 years of working experience. From Rust compilers to polished Business Intelligence Dashboards, I love making tools that are ready for the real world, transforming data into actionable insights and solutions.

WORK EXPERIENCE

Data Scientist

Trinity Property Consultants

📅 May 2025 - current

📍 California, United States (Hybrid)

- Deployed scalable data pipelines in Microsoft Fabric/ADF, leveraging lakehouse medallion architecture for structured data processing and analytics.
- Engineered PySpark, Hadoop, and SQL workflows, boosting data processing efficiency by 80% across diverse business domains.
- Designed STAR schema Direct Lake data models to optimize BI performance, decreasing load times by 15x
- Replaced SaaS Business Reporting with tailor-made solutions, saving around \$1.5 million yearly

Course Assistant

Faculty of Computing & Data Sciences at Boston University

📅 Jan 2025 - current

📍 Boston, Massachusetts, United States

- Conducted office hours to support on complex topics, from Rust programming to machine learning and neural networks, empowering students to succeed in rigorous coursework.
- Designed and delivered instructional support in Rust, UNIX systems, Data Structure & Algorithms, and Machine Learning concepts, helping students master foundational and advanced programming skills.
- Enhanced cross-platform accessibility, developing Windows Subsystem for Linux (WSL) integrations and instructions, ensuring seamless learning experiences across Operating Systems.

Data Analyst Intern

Red Tail Acquisitions

📅 Aug 2024 - Jul 2025

📍 Irvine, California, United States (Hybrid)

- Optimized SQL databases to enhance the performance of Python-based machine learning models, resulting in faster data retrieval and improved predictive accuracy.
- Crafted interactive reporting solutions using Power BI, streamlining data analysis processes and reducing report generation time by 95%.
- Leveraged statistical and machine learning models to optimize budget forecasting for a multi-million-dollar portfolio.

Revenue Analyst Intern

Highway West Vacations

📅 May 2023 - Aug 2023

- Optimized daily rates by analyzing performance metrics, resulting in a 15% increase in revenue within six months.
- Streamlined manual reporting across eight Property Management Systems to an automated environment, removing over 50 hours of weekly manual reporting
- Analyzed market research, boosting property acquisition strategies and enhancing forecast accuracy by 25%.

PROJECTS

- [frosts](https://joeyrussoniello.github.io/frosts/): A fully documented pandas-like framework and compiler for Power Automate and the Excel Office Scripts API.
- [seleniumeasy](https://github.com/JoeyRussoniello/EasySelenium): A PyPi package to reduce the boilerplate of Web Scraping with Selenium.
- [NFL ML](https://github.com/JoeyRussoniello/NFL-ML): A Random Forest Super Bowl Prediction Model (95% accuracy, 75% recall) trained on a 400 feature web-scraped dataset
- [ProcessPeeker](https://github.com/JoeyRussoniello/ProcessPeeker): A cross-platform CLI tool to track and visualize individual process CPU/Memory Usage, and Disk I/O, over a session
